HEMATOLOGY-SPECTROPHOTOMETRY WORKSHOP

- Sponsors:** Laboratory Division of the National Communicable Disease Center (NCDC)
Department of Botany and Microbiology, Montana State University
Bureau of Health Manpower (BHM)
Montana State Department of Health
- Faculty:** Marguerite L. Candler, M.D., Medical Director, Hematology Unit, NCDC
Lawrence H. Sullivan, Chief, Clinical Chemistry and Hematology Training Unit, Laboratory Consultation and Development Section, NCDC
The Ortho Diagnostics Trunk and Staff
William D. Hill, M.D. (Pathologist), Assistant Professor, Montana State University, Professional Coordinator for the course at the University
- Schedule:** June 9-10 (Monday-Tuesday) -- Hematology-Human Blood Cell Morphology
June 11-12 (Wednesday-Thursday) -- Immunohematology Seminar on the Fundamentals Necessary for a Safe Transfusion; Laboratory Exercise in Blood Banking Techniques (Ortho Diagnostics is supplying material and assistance on these two days.)
June 13-14 (Friday-one-half day Saturday) -- Instrumentation in the Clinical Laboratory (This will deal largely with spectrophotometry.)

This course is being financed by a grant to the University from the Bureau of Health Manpower. Because we have not received final approval of this grant, we cannot send out official application forms and this bulletin should be considered as a preliminary announcement. Under a BHM grant the student is given a stipend of \$16.00 per day if he is from out-of-town. However, the student must arrange for his own transportation to and from the course.

The course will be limited to twenty students and applicants must be currently serving as medical technologists. Employees of the Federal government are not eligible for the stipend.

During 1968 we presented two NCDC workshops in Bozeman; one in syphilis serology and the other in medical microbiology. Although we had twenty registrants for the latter, we ended up with only 18 full-time students. Each vacancy in an intensive workshop such as this is worth over one hundred dollars in wasted time, talent, and materials, so it behooves each person who is accepted to make certain that someone is at the laboratory bench reserved for him when the course begins eight o'clock Monday morning.
